

Upgrading Registry to v0.8.3

The implementation of Names was significantly modified in v0.8.3 ([CO-333](#)). To update a pre-v0.8.3 database, execute the following SQL *after updating the database schema*:

Flag all existing names as primary names. (v0.8.3 allows multiple names per Org Identity or CO Person.)

```
SQL> update cm_names set primary_name = true;
```

Reconfigure any enrollment flow attributes that collected a Preferred CO Person Name to consider the name of type Official instead.

```
SQL> update cm_co_enrollment_attributes set attribute = 'p:name:O' where attribute = 'p:name:P';
```
