Teaching and Learning Capability Map

Introduction

An **enterprise capability map** shows the highest level **business capabilities** that a particular enterprise needs to succeed. Enterprises have different maps, as their goals and size vary. A capability map can extend to an enterprise that includes multiple organizations, such as a university system or consortium.

See the Capability Library page for more about the concept of capabilities, and for discussion of the specific capabilities covered in the RATL.

Reference Capability Map

The reference capability map below summarizes the capabilities covered in the RATL. This is a *reference* map; in your planning process, you will likely remove, add, or move capabilities on the map related to teaching and learning.
