Agenda:

- Review Eric's latest draft of the Cookbook in preparation for the Assurance Implementers call on 1/8: [InCommon Silver with Active Directory Domain Services Cookbook - DRAFT 20131213](#)

Notes

- Minor changes were made to the document:** Restructuring of section 2.4 Review to remove dependencies in the text on when review has/will occurred/occur by AAC and the community.
 - Typos
- Ron pointed out that we don't have references to the sources we used to determine, for example, that AD does not use approved algorithms to store credentials. We may want to add an appendix of references if we get feedback along those lines.
