

# Source Repository

The COnanage project uses a [centralized workflow](#). There are several github repos that serve as the central repository.

Use the `git@github.com` style notation if you have uploaded SSH keys to github and will be given commit privileges. Otherwise, use the `https://` URL if you just want to clone the repo.

- COnanage Registry (v4 and earlier)
  - <https://github.com/Internet2/comanage-registry>
  - `git clone git@github.com:Internet2/comanage-registry.git`
  - `git clone https://github.com/Internet2/comanage-registry.git`
- COnanage Registry (v5 and later)
  - <https://github.internet2.edu/COnanage/registry/>
- COnanage Match
  - <https://github.internet2.edu/COnanage/match>
- COnanage Directory
  - <https://github.com/Internet2/comanage-directory>
  - `git clone git@github.com:Internet2/comanage-directory.git`
  - `git clone https://github.com/Internet2/comanage-directory.git`
