Exploration of K-12 schema issues

Use Case Development

Some of the **InCommon/Quilt pilots** are reaching the stage where schema questions come up. The pilot team would like to launch the work by identifying and documenting a small set of motivating use cases. The following is a discussion-starter draft of a template that pilot project teams would be encouraged to fill in. MACE-Dir participants are invited to suggest additions and improvements to this **use case template.**

> ***Template***
>
> - ***Describe the population*** *that will be accessing services in this pilot*
> - ***Describe the services and resources*** *this pilot will make available to authorized members of the population*
> - *Have conversations with the providers of services and resources made clear* ***what information about users will be relevant*** *to the service providers' decisions:*
>   - *whether or not to grant access (for example, status - such as currently enrolled or current instructor)?, or*
>   - *level of, or restrictions to access? (for example based on age or grade level, role as instructor/administrator /student)?*
> - *Who or what should be* ***the authoritative source*** *for each of these attributes?*
> - ***Do internal Service/Resource accounts exist*** *for users of the service?** *If so, describe how those are provisioned (e.g. file upload, vendor-provided API, SAML assertion)*
> - *Has it been decided* ***where the Identity Provider will run****? **What credentials** the users will use to authenticate?*
>   - *If so, please describe*

Actual Use Cases
