

Notes 09.17.2014 Conference Call

Agenda

- Roll call
- Agenda bash
- CAS strategies
 - How do they two differ?
 - How do they relate to the outsourced Cirrus Bridge?
 - Do we keep both, one, or none?
- IdP strategy docs
 - Review and discuss existing proposals.
 - Is there other info to collect?
 - Are we satisfied with the list of alternatives?
- Timeline
 - Present and get feedback on timeline for report drafts.
- Tech Exchange
 - ACAMP discussion topic
 - Face-to-face meeting after end of Tuesday's ACAMP

Call Notes

- Attendees
 - Mark Scheible, MCNC
 - Mark Beadles, OARnet
 - Brandon Saunders, IdM Integration
 - Dave Alexander, IdM Integration
 - Shaun Abshire, WiscNet
 - Chris Liechty, WiscNet
 - Ben Poliakoff, Reed College
 - Steven Carmody, Brown University
 - Dedra Chamberlin, Cirrus Identity
 - David Walker, Internet2
 - Janemarie Duh, Lafayette College
- CAS
 - CAS local - native interfacing using CAS protocol; IdP talks to federation via CAS protocol or SAML
 - Mark Beadles will work on local CAS solution with Brandon backing
 - CAS gateway - using SAML - difficult but Brandon will look at it
 - Dedra - Cirrus has an IdP in the Cloud using local CAS authN and native CAS attribute release
 - Is there overlap with the Cirrus Bridge solution? Yes, but we are OK with some overlap.
- Our charter
 - Mark Scheible raised the point that our charter says that one of our goals is to "Increase the number of participating campuses that operate an IdP service." We decided that our interpretation of that goal, however, is to "Increase the number of participating campuses that have a registered IdP," allowing for outsourced IdPs.
- Review of completed strategy docs
 - SimpleSAMLPHP - Ben - has feature parity with local Shibboleth IdP
 - Flexible - used by Cirrus Gateway and Hub & Spoke
 - Outsourced Shibboleth IdP - Mark Beadles - Fischer Identity has this solution. Gateway between the local IdMS and IdP.
 - Question from Steven: how do the requirements of the local campus change? OARnet has schools doing this. Can we add these use cases to the report?
 - Appendix listing implementation case study(ies). Mark Beadles will check on use cases
 - Outsourced Vendor IdP - Cirrus Bridge - Dedra: for campuses that don't want to stand up an IdP or use SimpleSAMLPHP but want to keep credentials local.
 - One-time integration discussion on attribute release.
 - Waiting on permission for use case
 - Upkeep and feeding - add. e.g., modifications that may be needed for certain cases
 - Steven: support for attribute release? Call out differences in value of this approach depending on which SP. List options. Crazy custom work but these business apps aren't where campuses would start. Incorporate use case. Therefore, they would be releasing a very small bundle. Steven: "do what is right."
 - The above point references the maturity of a campus as it moves through the federation. Roadmap or guide of how a campus might progress can be added to the report.
 - Hub & Spoke - Mark Scheible - used to deploy a federation but here it is used as an IdP strategy
- Timeline
 - For next call, 10/1, finish up with strategy docs. Brainstorm conclusions and recommendations
 - First draft of report scheduled for 10/15 call
 - The meeting after that will be held during Identity Week with a second draft due then
 - One or two calls during November followed by final report
