NTAC Peering
6/17/08

In attendance: Jeff Bartig, Michael Lambert, Caren Litvanyi, Bill Owens, Chris Robb, Linda Roos, Steve Wallace

Agenda

1. Update on CPS from Internet2
2. Update on IPv6 migration
3. Other topics

1. Update on CPS from Internet2

Caren reported that additional peerings with added withthree providers and one new peer has been added. There was a problem with one peer because of a scheduled outage that was extended by Internet2 appearing to be down. Everything appears to be fine now.

2. Update on IPv6 migration

Caren will be providing dates for the migration soon. Most of the issues for those that were still not migrated are related to how addresses are advertised. If people advertise consistently, most people won't be affected.

Where do we go from here?

-transition existing transit (with five days)

-then move other commercial peers

Caren asked for questions and comments.

3. Other topics

Steve Wallace reported that Internet2 is performing capacity planning for CPS in anticipation of growth in the fall as school starts.

The next NTAC peering group meeting will be held during Joint Techs.
