

Collecting NSF Demographics

COmanage Registry supports the collection of [NSF Demographic Information](#). This information is attached to the CO Person record, meaning it is unique per-CO.

By default, the link to manage this information is disabled. To enable it on a per-CO basis, set the appropriate option via *CO Settings*. Note that this setting only controls the rendering of these links (which appear on the CO Person Canvas sidebar). If NSF Demographics are disabled after some data is collected, the data will remain available in the database, and will reappear if NSF Demographics are subsequently re-enabled.
