 For Grouper 2.5+ see the new approach for [Grouper 2.5+ packaging and versioning strategy](#)

- [Grouper installer non interactive apply patches run tests example](#)
- [Grouper installer non interactive auto apply patches example](#)

The grouper installer can run in non interactive mode and you can answer all the questions in the `grouper.installer.properties`.

To run with a `grouper.installer.properties` create the config file and run like this. Note on windows use a semicolon instead of a colon

```
UNIX
java -cp .:grouperInstaller.jar edu.internet2.middleware.grouperInstaller.GrouperInstaller

WINDOWS
java -cp .;grouperInstaller.jar edu.internet2.middleware.grouperInstaller.GrouperInstaller
```

See the use defaults as much as possible in the `grouper.installer.properties` (copy from `grouper.installer.example.properties` to the `grouper.installer.properties`, then look at the commonly changed items and move them to the `grouper.installer.properties` as needed)

```
#####
## Autorun properties
##
## If you uncomment one of these properties it will be used as empty, only uncomment to use
##
#####

#### set this to true to try to use defaults for everything. Only things without default values will need to
be set
grouperInstaller.autorun.useDefaultsAsMuchAsAvailable = false

##### AUTORUN PROPERTIES WITH NO DEFAULT OR ARE COMMONLY CHANGED
## Note: not all of them need to be filled out for all operations

# autorun Do you want to 'install' a new installation of grouper, 'upgrade' an existing installation
# or 'patch' an existing installation\n"
# (enter: 'install', 'upgrade', 'patch' or blank for the default)
# default is controlled in a config in this config file: grouperInstaller.default.installOrUpgrade
# grouperInstaller.autorun.actionEgInstallUpgradePatch =

# autorun, What do you want to install/upgrade/patch? api, ui, ws, or psp?
# note, default is configured in this file: grouperInstaller.default.appToUpgrade
# grouperInstaller.autorun.appToUpgrade =

# autorun, Where is the grouper api/ui/ws/psp installed for upgrades / patching?
# grouperInstaller.autorun.grouperWhereInstalled =

# autorun grouper system password (its not secure to have a plain text pass in a config file)
# grouperInstaller.autorun.grouperSystemPassword =
```

```
# autorun db url
# grouperInstaller.autorun.dbUrl =

# autorun db user
# grouperInstaller.autorun.dbUser =

# autorun db pass (note, it is not good security to have plaintext passwords in text config files)
# grouperInstaller.autorun.dbPass =

# autorun Do you want to init the database (delete all existing grouper tables, add new ones) (t|f)?
# grouperInstaller.autorun.deleteAndInitDatabase = f

# autorun, uncomment to make work, Enter in the Grouper install directory (note: better if no spaces or special
chars)
# default is controller in a config in this config file: grouperInstaller.default.installDirectory
# if that is blank or not configured, default is current working directory
# grouperInstaller.autorun.installDirectory =

# autorun, uncomment to make work, Enter in a Grouper temp directory to download tarballs
# default is controller in a config in this config file: grouperInstaller.default.tarballDirectory
# if that is blank or not configured, default is current working directory
# grouperInstaller.autorun.tarballDirectory =

# autorun patchCreator: Enter a description for this patch, e.g. GRP-123: fixes a problem with such and such:
[required]
# grouperInstaller.autorun.patchDescription =

# autorun patchCreator: Enter the risk level for the patch: (low|medium|high): [required]
# grouperInstaller.autorun.patchRiskLevel =

# autorun patchCreator: Is this a security patch? (t|f): [t]
# grouperInstaller.autorun.patchSecurity =

# autorun What is the location of your tomcat server.xml for the UI?
# Note, if you dont use tomcat just leave it blank or type 'blank':
# grouperInstaller.autorun.locationOfTomcatServerXml =

# autorun patch action: What do you want to do with patches (install, revert, status)
# grouperInstaller.autorun.patchAction =

# autorun patch Enter the comma separated list of files to make a patch from: [required]
# grouperInstaller.autorun.patchFilesCommaSeparated =

# autorun Enter any patch names that are dependencies that you know of (comma separated), or blank for none:
\n");
# grouperInstaller.autorun.patchNameDependenciesCommaSeparated =
# It is NOT detected that your patch requires restart, please confirm this, does it require restart (t|f)? [f]
