New and Updated Federation Manager Will Support Interfederation Implementation

New and Updated Federation Manager Will Support Interfederation Implementation

InCommon Operations has deployed a number of new or updated user interfaces to the Federation Manager:

1) A new user interface for IdP operators to self-assert membership in the Hide From Discovery Category

2) An updated user interface to manage Requested Attributes in SP metadata

3) Two new user interfaces for Metadata Export, one for IdPs and one for SPs

Note: InCommon Operations will begin exporting metadata at scale to eduGAIN on February 15, 2016. At that time, all IdP metadata will be exported by default. All SPs that have explicitly opted in will be exported as well. Site Administrators choose whether or not to include their metadata in the Export Aggregate via the user interfaces mentioned above. You can do that any time between now and February 15.
