

Upgrading Registry to v1.0.3

- [Provisioning Plugins](#)

Provisioning Plugins

Registry v1.0.3 adds support for ordering of Provisioning Targets. The easiest way to set this order for existing deployments is via *Configuration >> Provisioning Targets >> Reorder Provisioning Targets*. Drag the entries into the desired order. (If they are already in the desired order, you must drag at least one out of order, click *Done*, and then move it back to the desired order.)

If no order is specified, provisioners will continue to execute non-deterministically (the behavior prior to v1.0.3).
